

The figure displays a large number of time series, each consisting of a solid line and a dashed line of the same color. The x-axis represents time from 0 to 400. The y-axis represents the magnitude of the signals. The plot is characterized by a dense central region of high-frequency oscillations, with a clear horizontal band of activity. Above and below this central band, there are fewer, more widely spaced oscillations, indicating a change in the underlying process or a different set of parameters for those series. The overall pattern suggests a complex system with many interacting components, each exhibiting its own oscillatory behavior.
